

DELUXE DECK TILES

INSTALLATION GUIDE

Thank you for choosing NeoTimber's Deluxe Deck Tiles. These tiles and their associated Edge Ramps are designed to be installed quickly and easily without the need for use of tools or equipment.

IMPORTANT NOTE

Always make sure that you are laying your deck tiles on a clean flat solid surface. The tiles must not be installed on an unlevel surface such as dirt or soil.

INSTALLATION INSTRUCTIONS

1. Each tile features 2 sides with 'male' connectors, and two sides with 'female' connectors (located on the underside).
2. Position the first tile in a corner along the edge of the installation area.
3. Ensure there is a 10mm gap between all walls/structures and the tiles to allow for expansion and contraction.
4. Click the 'female' connectors of the next tile on to the 'male' connectors of the installed tile. That's it!
5. Continue laying tiles till your deck is complete.

INSTALLING EDGE & CORNER RAMPS

1. Straight Edge Ramps and Corner Edge Ramps feature four 'female' connectors to connect to a deck tile and additional side connectors for connecting to further Edge Ramps.
2. Connect the Ramp to the tile.
3. Connect the Ramp to the adjacent ramp pieces.

ONGOING MAINTENANCE

1. Inspect the tiles and reconnect any connections that may have worked loose over time to ensure your deck remains level.
 2. Clean the tiles when required by applying warm soapy water to the surface of the boards and cleaning with a soft bristled brush.
