

SOLAR LED DECK LIGHTS

INSTALLATION GUIDE

Thank you for choosing NeoTimber's Solar LED Deck Lights. Please read these instructions carefully before installing your light.

Important Note:

Before drilling any mounting holes it is important to think about the amount of light each light will receive each day. Position the light in an area that gets good sunlight which is not obstructed by trees, foliage, buildings, fences or the shadows that these create. For best results mount the light horizontally.

INSTALLATION INSTRUCTIONS

1. Carefully mark the position for the hole.
2. Drill a 60mm hole using an appropriate hole cutter.
3. If necessary, use a file or sandpaper to smooth the hole edges.
4. Place the spotlight into the hole, ensuring it is level and secure.
5. Note: No screws or other fasteners or glues will be needed to secure the spotlight in place, just insert the solar spot light into the hole which you drilled.

REQUIRED TOOLS

- Drill bits (appropriate for the material you are drilling into, such as wood, metal, or composite decking).
- Drill.
- Measuring tape or ruler.
- Pencil or marker for marking.
- Safety glasses and gloves.

ONGOING MAINTENANCE

1. Periodically clean the solar panel to ensure it remains free of dust and debris.
 2. Check the spotlight for any signs of wear or damage, and replace any worn-out parts as needed.
-
